---	--	---

- Basic IT Programmes i.e HTML, CSS, JavaScript
- I think more focus on academics and fundamentals on subjects like Discrete Mathematics, Computer Architecture, Operating System, etc., are important. We need engineers who have a strong foundation, so we can mould them into good programmers.
- Integrate coding and programming languages relevant to the current industry demands.
- Should be aware of latest trends in the field
- technologies trends in market

## Report of the Alumni feedback on "Academic performance and Ambience of the Institution"

7. Any other suggestions for overall syllabus improvement:

- Latest technologies in the industry should also be included in the syllabus.
- Students need to get more connected with the industry and know how the technology works other than theoretical knowledge.
- Include more technical Practices
- More practical sessions in core subjects
- Syllabus needs to be updated with recent and relevant topics in the industry. The application of ML and AI can be included. Possibilities of automation using computer programming can be included.
- Need to focus more on advanced practicals than focussing on theory subjects
- Need to teach more in detail about instrumentation and other related subjects. Also students should be familiar with the type of instrument and specification sheet . Additionally they must know about piping instrumentation diagram
- A syllabus should always meet industry requirements. It should be revised on this basis.
- All good
- Need more workshops related to industrial level work
- Workshops or any other plans to improve the technical skills of students. Also speaking skills and presentation skills.
